

## PROJECT PROFILE

**PROJECT:** Tanker Protection  
**LOCATION:** Austria

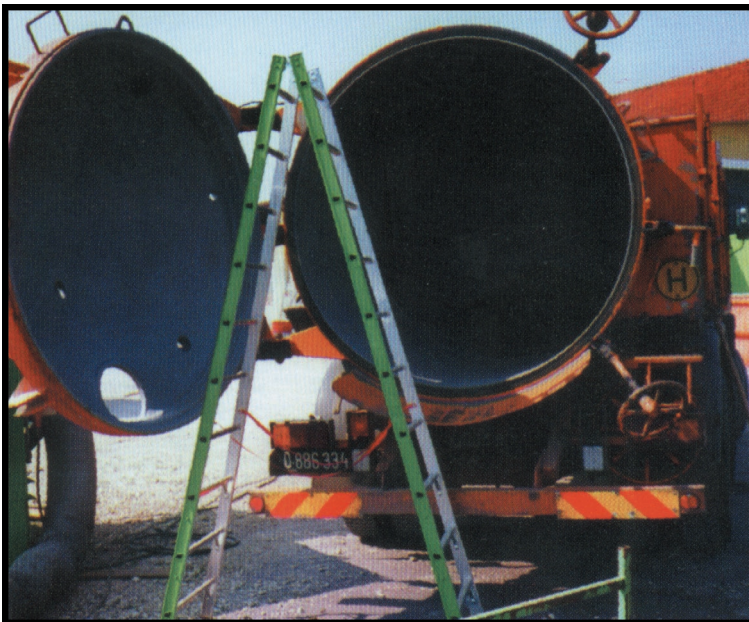

### THE PROBLEM

This lorry was used by a chemical company to transport aggressive chemicals and sewage.

The internal surfaces of the storage tank had become badly worn and corroded and required relining with a chemical resistant coating.

### THE SOLUTION

The internal surfaces were first abrasive blasted to a standard of SA2 1/2 to remove all contamination.

All surfaces were then coated with Chemi-Tech EP which is an ideal coating for protection against sewage.
