## PROJECT PROFILE

**PROJECT:** Distribution Warehouse - External Cladding Refurbishment  
**LOCATION:** United Kingdom

### THE PROBLEM

The client had recently purchased these premises and wanted to upgrade the external cladding to match the corporate colours of its parent company, a leading manufacturer and distributor of audio CDs and associated equipment based in America.

Thortex was asked to provide a high performance refurbishment solution.

### THE SOLUTION

The external cladding was patch primed, where necessary, using Corro-Tech GP or Corro-Tech MC Primer followed by two coats of Uni-Tech UV in the client's corporate colour.

Uni-Tech UV is a two component, solvent-based polyurethane coating designed for the long-term protection of all types of structures including brickwork, concrete, GRP, steel, aluminium and certain types of cladding. It is UV stable and provides outstanding weather and graffiti resistance.

The client was delighted with the results and further work is now imminent following the success of this application.
