

PROJECT PROFILE

PROJECT: R.N.L.I. - Portacabin Refurbishment
LOCATION: United Kingdom

THE PROBLEM

The portacabin is used as a gift shop by the R.N.L.I. and was in need of redecoration.

They also used this opportunity to ensure that the exterior of the portacabin was coated in their corporate colours.

THE SOLUTION

The existing surface was prepared by mechanical wire brushing and then one coat of Uni-tech GP Primer applied followed by two coats of Uni-Tech UV.

The R.N.L.I. are very pleased with both the visual appearance and quality of the system.
