PROJECT PROFILE

PROJECT: Pedestrian Underpass - Sussex

LOCATION: United Kingdom

THE PROBLEM

East Sussex County Council were having severe problems with graffiti attack in two underpasses. Over a period of time, the underpasses had also become dull and dirty and were in need of brightening up as these underpasses were used a lot as a thoroughfare by the public.

THE SOLUTION

East Sussex County Council required a graffiti resistant coating system. They also decided they wanted murals on the walls. The wall areas were grit blasted to remove all existing coatings and contamination. One coat of Uni-Tech GP Primer was applied, followed by one coat of Uni-Tech UV to the specified colour and pattern of the mural. The entire surface was then sealed with one coat of Uni-Tech UV in clear. The system is offering excellent graffiti resistance and has completely transformed the appearance of the underpass.
