

PROJECT PROFILE

PROJECT: External Wall Protection
LOCATION: United Kingdom

THE PROBLEM

The walls of this hotel were suffering from severe ingress of moisture which was coming through porous brickwork and damaging the finished decor within the building.

The client required a system that would offer a long term solution to this problem.

THE SOLUTION

All walls which totalled 4500m² were high pressure washed.

Two coats of Aqua-Tech WP were then applied using spray equipment.

The application has been a complete success with the Aqua-Tech completely waterproofing the walls.

The client was delighted with the product's performance and further applications have now been undertaken.
