

## PROJECT PROFILE

**PROJECT:** External Plastisol Sheeting

**LOCATION:** United Kingdom

### THE PROBLEM

This factory building is the old manufacturing area for E. Wood Ltd.

As a result of our successes we have expanded our facilities to cope with the increases in sales.

The plastisol sheeting on the original manufacturing plant was now in need of upgrading so that it matched the new buildings that had been built.

### THE SOLUTION

We had already recognised the need for a coating system to upgrade plastisol sheeting.

The product that we developed is called Wall-Tech PU and is applied directly onto the cleaned and prepared plastisol sheeting with no need for a primer.

The product is supplied in a range of colours that match the standard colours of plastisol sheeting currently supplied.
