PROJECT PROFILE

PROJECT: LUL Northumberland Park - Maintenance Floor Refurbishment

LOCATION: United Kingdom

THE PROBLEM

This London Underground Maintenance Depot at Northumberland Park is used for the maintenance of the new LUL rolling stock. The project comprised a total floor refurbishment of the depot platforms including the workshops and tool rooms.

The floor area totalled over 2,000m².

THE SOLUTION

All loose/flaking material was removed from the previously coated surface, after which the substrate was thoroughly cleaned, abraded and primed with Uni-Tech GP Primer. Floor-Tech HB in green was then applied with yellow lining to give the client their required finish.

Floor-Tech HB is a solvent-free, ceramic-reinforced, heavy duty coating designed for the long-term protection of floors in high "wear & tear" environments. It offers optimum levels of adhesion, abrasion, impact and chemical resistance.
