## PROJECT PROFILE

**PROJECT:** MoD Kitchen Floor Refurbishment  
**LOCATION:** United Kingdom

### THE PROBLEM

The tiled floor of this kitchen at a Ministry of Defence (MoD) establishment in Northern Ireland was in need of refurbishment to ensure it continued to meet strict environmental health regulations.

The client required a solvent-free, flexible floor protection system that could absorb the impact of kitchen utensils being dropped.

### THE SOLUTION

The entire floor area was thoroughly cleaned, after which the substrate was primed with Uni-Tech GP Primer. Our solvent-free, ceramic-reinforced polyurethane coating Floor-Tech FB was then applied.

The Floor-Tech FB system offers superior abrasion, impact and chemical resistance as well as a high degree of flexibility. It also meets USDA/FDA requirements for use in food preparation areas.

Based on the success of this application, a further order for a second kitchen at the same MoD site has now been secured.
