PROJECT PROFILE

PROJECT: Abattoir – Floor Protection
LOCATION: Hamburg – Germany

THE PROBLEM

This building was part of an abattoir and was used as a processing area for the animals.

The concrete was breaking up and exposing the underlying tiles. This had created an uneven and dangerous floor, which was impossible to clean effectively.

The client required a hygienic coating system, which would withstand regular traffic and intensive regular cleaning.

THE SOLUTION

Thortex Deutschland removed all the old concrete and filled the holes with a mixture of Floor-Tech SP Primer and quartz sand. A further coat of Floor-Tech SP Primer was then applied over the total surface and this was completely obliterated with quartz sand to help fill minor floor defects and promote adhesion for a flexible top coat.

Two coats of Floor-Tech FB completed the Thortex system, providing a highly durable and seamless floor system that was easy to clean. Floor-Tech FB is a high build solvent free flexible polyurethane that has excellent impact resistance and is ideal for use in cold stores and processing areas.
