

PROJECT PROFILE

PROJECT: Plastics Manufacturer - Industrial Floor Refurbishment
LOCATION: Spain

THE PROBLEM

The existing floor coating in this high use area of the plant had become damaged due to heavy factory traffic. A flexible floor coating was sought to provide the required level of protection in this aggressive industrial environment.

THE SOLUTION

The non-porous concrete floor surface was prepared and primed using Uni-Tech GP Primer. Two coats of Floor-Tech FB in RAL 6021 were then applied.

This solvent-free, ceramic-reinforced polyurethane floor system has been specifically developed for use as a high build, flexible floor coating, which provides outstanding impact, abrasion and chemical resistance.
