PROJECT PROFILE

PROJECT: Diageo Factory – Floor Refurbishment
LOCATION: Northern Ireland

THE PROBLEM

Diageo, a major drinks manufacturer, required the floor of their powder room refurbishing to create an anti-slip finish. The coating had to provide good slip resistance combined with high performance and flexibility. The area to be coated was 425 m² and had to be completed and ready for traffic in a short period of time.

Thortex and one of their Authorised Applicators, C & D Industrial, were asked to provide a coating system that met with the client's requirements.

THE SOLUTION

The floor was blast tracked and all loose material removed. One coat of Floor-Tech SFU Primer was applied at 100 microns followed by one coat of Floor-Tech FB with grip to give a slip deterrent finish.

Floor-Tech FB is a flexible polyurethane system, which is ceramic enhanced to provide added protection. Varying sizes of grip can be incorporated to provide the required level of slip resistance. Floor-Tech FB is ideal for asphalt and flexible surfaces.

The project was completed within the stipulated time scale and the client pleased with the floors appearance and performance.
