PROJECT PROFILE

PROJECT: Henderson's Foods - Plastisol Cladding Refurbishment
LOCATION: United Kingdom

THE PROBLEM

Henderson's Foods wanted to refurbish its plastisol-clad warehouse and distribution centre totalling 8,000m², which had discoloured over time. The client stipulated that minimal disruption to the distribution centre was a critical element of the refurbishment work, as Henderson's Foods operates 24 hours a day - 7 days a week.

The client asked Thortex for a high performance durable finish with excellent UV, erosion resistance and weather resistance.

THE SOLUTION

The cladding was pressure washed and allowed to air dry. One coat of Wall-Tech PU was then applied by C&D Industrial Services, a Thortex Authorised Applicator.

Wall-Tech PU is a moisture-cured, flexible coating that can be applied directly onto clean, sound plastisol without the need for a primer. Wall-Tech PU has been tested by Corus for use as a coating for the refurbishment of Colorcoat HPS200® plastisol with good adhesion results.

The client expressed total satisfaction with the work executed and further work has now been secured.
