PROJECT PROFILE

PROJECT: Police Station - Cell Door Refurbishment
LOCATION: United Kingdom

THE PROBLEM

The cell doors within this Police Station were in need of immediate refurbishment. As can be seen from the photograph, the cell doors had suffered sustained graffiti abuse and impact damage.

Thortex was asked to provide a refurbishment solution.

THE SOLUTION

The Chemi-Tech 152 LV system was selected for this application due to the fact that it has excellent film build properties enabling a high film thickness in a single coat and outstanding durability. The third major product benefit is that it can be applied to steel with the minimum of surface preparation.

Chemi-Tech 152 LV is a two component, solvent-free epoxy coating and is now our recommended system for this type of application.
