PROJECT PROFILE

PROJECT: Police Headquarters – Roof Refurbishment
LOCATION: Portugal

THE PROBLEM

The flat roof of this police headquarters in Lisbon was covered with mineral felt, which had been left uncoated.

In order to prevent future water ingress, as the felt degraded over time, the client chose to refurbish the 3,600m² roof using a high performance liquid applied roofing membrane.

THE SOLUTION

The roof area was suitably prepared and primed with Poly-Tech BP Primer, ensuring any damaged areas of felt had been repaired. The Poly-Tech system was then applied.

Poly-Tech is a universal roof protection system, which has been developed by Thortex for the long-term protection of all types of roof surface including asphalt, bitumen, mineral felt, asbestos cement, concrete and metal surfaces. As well as providing optimum levels of UV resistance, flexibility and durability, Poly-Tech offers outstanding waterproofing and weatherproofing properties.

The external walls of the police headquarters have also been protected using our single component waterproofing coating Aqua-Tech WP, which can be applied to masonry surfaces without affecting the natural appearance of the surface.
