

## PROJECT PROFILE

**PROJECT:** Church Refurbishment  
**LOCATION:** Latvia

### THE PROBLEM

This church had been allowed to fall into disrepair as shown by this photograph taken in 1933 highlighting the state of the church at the time.

Our distributor Ad Rem undertook total refurbishment of the church which was a major undertaking. Apart from repairing and refurbishing the walls, there was also a requirement to protect the roofs, the stucco mouldings, the floors within the church, the repairs of various timber structures internally and externally, and indeed protection of the oak doors within the building.

One of the requirements was to try and reproduce the church in its original state including reproduction of the roof colour and gold finishing on the roofing sections.

### THE SOLUTION

Refurbishing the church was a major task and involved numerous Thortex products including Wall-Tech CWC, Grano-Tech, Uni-Tech UV, Seal-Tech AW, Timba-Tech, Metal-Tech SG, Corro-Tech GP, etc.

In total, twelve different Thortex products were used on the church and in particular, the external wall surfaces were protected with Wall-Tech FP and the roof section was protected with Uni-Tech UV supplied in a special blue colour and also in a gold finish.

The pictures highlighting this refurbishment speak for themselves.
