PROJECT PROFILE

PROJECT: Eccleshill Sports Centre - Roof Refurbishment
LOCATION: United Kingdom

THE PROBLEM

The roof of the Eccleshill Sports Centre owned by Bradford Borough Council had deteriorated over time and was in need of refurbishment.

Bradford BC sought a liquid applied roof coating, which would provide long-term protection and superior resistance to the elements, ensuring no disruption resulting from water ingress would be caused to the busy sports centre below.

THE SOLUTION

The roof surface was cleaned, dirt & debris removed and any damaged areas repaired prior to the application of Poly-Tech BP Primer. The primed substrate, which totalled 1,100m², was then coated with the reinforced Poly-Tech system.

Poly-Tech is a universal roof protection system, which has been specially designed for the long-term protection of all types of roof surfaces. This single component, water-based elastomeric membrane has outstanding waterproofing and weatherproofing properties and offers optimum levels of UV resistance, flexibility and durability.

The client was pleased with the results.
