PROJECT PROFILE

PROJECT: Plastisol Roof Cladding Refurbishment
LOCATION: United Kingdom

THE PROBLEM

This recently purchased Plastisol clad building required extensive refurbishment before its new owners could place it back on the rental market. The 3000m² Plastisol roof had been re-coated, in the past, but this coating was now loose and flaking leaving exposed metal areas visible.

Thortex and one of its Authorised Applicators, Mitie Property Services UK, were asked to provide a solution that would protect the roof and improve its appearance.

THE SOLUTION

The roof was fully cleaned and all loose material removed. Using Corro-Tech AP Primer, all exposed metal areas of the cladding were primed. A coat of Wall-Tech PU in BS Colour 10A05 was then applied by spray.

Wall-Tech PU is a flexible polyurethane coating designed to be applied in a single coat and is an excellent alternative to expensive re-cladding for HPS 200 Plastisol clad buildings.

The works were completed in December 2004 and a 10 year warranty issued to the satisfied client, by Thortex.
