## PROJECT PROFILE

**PROJECT:** Roof Repairs

**LOCATION:** Portugal

### THE PROBLEM

This flat roof was suffering major problems from water penetration and the structure of the roof had deteriorated to a point where total refurbishment was required.

After discussions with the owners, Sorefane, who are a subsidiary of ABB, it was agreed that a complete refurbishment would be carried out using the Poly-Tech system.

### THE SOLUTION

The roof in question was thoroughly cleaned with detergent solution and water to remove all loose dirt and debris. The entire roof surface was then primed with Poly-Tech BP Primer, followed by two coats of Poly-Tech together with reinforcing sheet.

This roof has been a complete success and in addition to treating roof areas with Poly-Tech, Wall-Tech FP was also used on wall surfaces to provide total protection to the building in question.
