PROJECT PROFILE

PROJECT: Asphalt Roof Protection

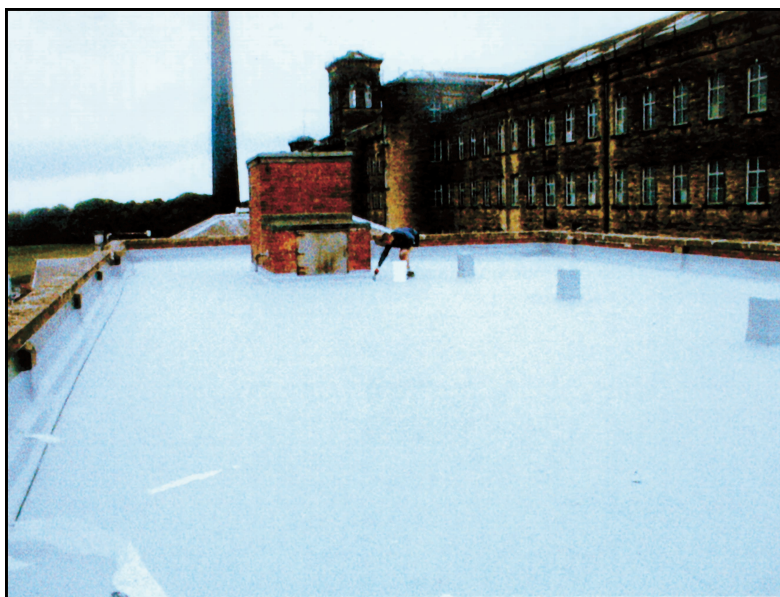

LOCATION: United Kingdom

THE PROBLEM

The roof of this mill was in need of refurbishment due to the effects of the environment and time. The client required a waterproof and weatherproof system, which would provide 15 years of protection.

THE SOLUTION

The total roof area was cleaned, dirt and debris removed and any damaged areas of asphalt repaired. One coat of Poly-Tech BP Primer was then applied followed by the Poly-Tech 15 Year system. The roof substrate was coated with Poly-Tech CSM into which the chopped strand matt was rolled and embedded. A second coat of Poly-Tech CSM was then applied.

Poly-Tech CSM is a universal roof protection system, specifically designed for the long-term protection of all types of roof surfaces. Based on a complex blend of resins and polymers reinforced with inorganic fibres and other agents, this system has outstanding waterproofing and weatherproofing properties and offers optimum levels of UV resistance, flexibility and durability.
