PROJECT PROFILE

PROJECT: Food Industry
LOCATION: Barcelona—Spain

THE PROBLEM

This picture was taken at a Food Factory in Barcelona Spain.

This metallic roof of 4200 square meters needed to be repaired, having suffered from severe leaks.

The client was looking for a solution that would provide long term waterproof protection.

THE SOLUTION

Thortex designed a technical specification for the project and delivered application expertise.

The metal roof was prepared by high pressure cleaning.

Once the surface was cleaned, the surface was primed with Uni-Tech MC Primer. It was then followed by two coats of Poly-Tech in white colour.

The customer was highly satisfied by the result.
