PROJECT PROFILE

PROJECT: Institute of Higher Education - Workshop Floor Refurbishment
LOCATION: United Kingdom

THE PROBLEM

This Institute of Higher Education in North East Wales required a complete refurbishment of its engineering workshop floor.

The previously coated asphalt floor had degraded over time and showed signs of severe localised damage.

THE SOLUTION

The existing coating was completely removed. The damaged areas were cut out and reinstated with Floor-Tech PS prior to the application of Floor-Tech FB Primer. The primed substrate was then coated with Floor-Tech FB.

Floor-Tech FB is a solvent-free, ceramic-reinforced polyurethane coating which has been developed for use as a high build, flexible floor coating with outstanding impact and abrasion resistance.
